Gas Device (type B) Approval Certificate

Safety in the petroleum and fuel gas industry in Queensland is regulated under the *Petroleum and Gas (Production and Safety) Act 2004* (the Act) and the Petroleum and Gas (Safety) Regulation 2018 (the Regulation).

Approval of gas devices and gas fittings for supply, installation and use

A person must not supply a gas device (type A) or use a gas fitting, or install or use any type of gas device or gas fitting, unless the supply installation or use has been approved by the chief inspector or a person or body approved by the chief inspector for the particular type of gas device or gas fitting and, if a regulation prescribes a label for the gas device or gas fitting, the gas device or gas fitting complies with any relevant labelling requirements prescribed under the regulation.

A person must not supply a gas device unless the person gives the person to whom the device is supplied a written notice in the approved form stating that the installation and use of the device must be approved under the Act. An approval under the Act in relation to a gas device or gas fitting, that has been given by a person or body other than the chief inspector, ceases to have force only if the approval is cancelled or suspended by the approved person or body with the written consent of the chief inspector.

Action required

If a person approves the supply, installation or use of a gas device (type B) the person should:

- Give the owner, operator, or proposed operator, a certificate in the approved form about the approval (the Gas Device (type B) Approval Certificate) (the 'approval certificate');
- · Give a copy of the approval certificate to the Petroleum and Gas Inspectorate; and
- Retain a copy of the approval certificate for 7 years.
